

# 'CALA' INDOOR SAUNA

'Cala' by Auroom is a premium European-made sauna that exudes luxury and comfort in a sleek, modern design. Crafted from Thermo Aspen, it's available in two sizes—the 3-person 'Cala' or the 2-person 'Cala Mini'.

Because of how comfortable they are, it may come as a surprise to learn that these are some of the smallest sized European saunas on the market. This compact external footprint is ideal for those not wanting to take up much room, as you can fit them in tight spaces such as a bathroom or balcony. It also means you'll require a smaller electric heater—comparatively resulting in cheaper running costs.

# KEY FEATURES

## GLASS FRONT

Upgraded to a full glass front to make your sauna feel spacious.

## SMALL & MIGHTY

Save on both the time it takes to heat up your sauna and the electricity cost.

## MODERN DESIGN

Sleek and minimalist, fitting seamlessly into contemporary or traditional home decor.

## EASY INSTALLATION

Engineered for straightforward setup in a variety of indoor settings.

## HEATER

Select a heater that combines top functionality with elegant aesthetics (sold separately).

## HIGH-QUALITY CONSTRUCTION

Made to last! Made with heat-treated Thermo-Aspen from Nordic forests and tempered glass for safety.

An aerial photograph of a lush, dense forest. The forest is composed of various types of trees, including tall, dark evergreens and lighter green deciduous trees. A river or stream flows through the lower left portion of the image, its surface reflecting the surrounding greenery. The overall scene is a vibrant display of natural beauty and biodiversity.

SDS Australia takes pride in using  
timber materials that meet high standards  
of environmental sustainability.  
Our supplier is committed to finding  
balanced solutions for smart wood production  
that minimise environmental impact.

Reducing the carbon footprint of a building is a major challenge for the entire construction industry. Manufacturers of building materials can play a major role by investing in product development, energy efficiency and renewable energy to ultimately reduce the environmental impact of their products. It is possible to produce sustainable materials, products and solutions with a smaller carbon footprint.

Thermally treated wood is a good alternative to other building materials, as carbon emissions from wood are reduced during thermal treatment and the life of the wood is extended.

## **Responsible wood sourcing**

Our supplier carefully monitors where the wood comes from.

They only source the best quality wood from sustainably managed forests around the world. This helps reduce the negative impact of deforestation.
