HEATER

Select a heater that combines top functionality with elegant aesthetics (sold separately).

SIMPLE SAUNA INSTALLATION

Comes as a flat-pack for simple assembly, with expert Sauna installation available upon request.

An aerial photograph of a vast, dense forest. The forest is composed of various types of trees, including tall, dark evergreens and lighter green deciduous trees. A river or stream flows through the lower left portion of the image, its surface reflecting the surrounding greenery. The overall scene is lush and verdant, with a misty or hazy atmosphere in the upper right corner.

SDS Australia takes pride in using
timber materials that meet high standards
of environmental sustainability.
Our supplier is committed to finding
balanced solutions for smart wood production
that minimise environmental impact.

Reducing the carbon footprint of a building is a major challenge for the entire construction industry. Manufacturers of building materials can play a major role by investing in product development, energy efficiency and renewable energy to ultimately reduce the environmental impact of their products. It is possible to produce sustainable materials, products and solutions with a smaller carbon footprint.

Thermally treated wood is a good alternative to other building materials, as carbon emissions from wood are reduced during thermal treatment and the life of the wood is extended.

Responsible wood sourcing

Our supplier carefully monitors where the wood comes from.

They only source the best quality wood from sustainably managed forests around the world. This helps reduce the negative impact of deforestation.
